Contents of Volume 13

Numbers 1 and 2, February 1975

DANA A. POWERS, GEORGE R. ROSSMAN, HARVEY J. SCHUGAR, AND HARRY B. GRAY. Magnetic Behavior and Infrared Spectra of Jarosite, Basic Iron Sulfate, and Their Chromate Analogs.....	1
ROBERT TROĆ. Magnetic Susceptibility of the Uranium Nitrides.....	14
L. H. BRIXNER AND P. E. BIERSTEDT. Optical and Electronic Properties of some New Rare Earth-Doped Lead Sodium Apatites	24
W. M. REIFF, I. E. GREY, A. FAN, Z. ELIEZER, AND H. STEINFINK. The Oxidation State of Iron in some Ba-Fe-S Phases: A Mössbauer and Electrical Resistivity Investigation of Ba_2FeS_3 , $Ba_7Fe_6S_{14}$, $Ba_6Fe_8S_{15}$, $BaFe_2S_3$, and $Ba_9Fe_{16}S_{32}$	32
J. P. MOTTE ET N. N. GREENWOOD. Etude par Effet Mössbauer de la Structure et des Propriétés de Diffusion de la Phase Antifluorine Nonstoechiométrique: Li_8SnP_4	41
J. S. KASPER AND K. W. BROWALL. Single Crystal Structure Study of α - Ag_2HgI_4 : Evidence for Anharmonic Vibration.....	49
JEAN-PAUL FAYOLLE, FRANCIS STUDER, GILBERT DESGARDIN, ET BERNARD RAVEAU. Etude de Nouveaux Oxydes Ternaires d'Europium Divalent, de Type Bronze Oxygéné de Tungstène Quadratique et de Type Pérovskite.....	57
ANNICK MICHELET, ALAIN MAZURIER, GASTON COLLIN, PIERRE LARUELLE, ET JEAN FLAHAUT. Etude Structurale des Systèmes Ln_2S_3 - GeS_2	65
C. P. KHATTAK, D. E. COX, AND F. F. Y. WANG. Magnetic Ordering in Ba_2MnReO_6	77
LENNART HÄGGSTRÖM, ROGER WÄPPLING, TORE ERICSSON, YVONNE ANDERSSON, AND STIG RUNDQVIST. Mössbauer and X-Ray Studies of Fe_5PB_2	84
JEAN-CLAUDE GRENIER, MICHEL POUCHARD ET PAUL HAGENMULLER. Influence de la Substitution du Fer sur les Propriétés Magnétiques des Solutions Solides $Ca_2Fe_{2-x}M_xO_5$ ($M = Al, Sc, Cr, Co, Ga$).....	92
CATHERINE DJEGA-MARIADASSOU, FRANÇOISE BASILE ET PAUL POIX. Etude Cristallographique et Magnétique de la Solution Solide $Fe_{2-2x}Ni_{1+x}Sn_xO_4$	99
TAKASHI KATSURA, MASATAKA WAKIHARA, SHIN-ICHI HARA, AND TADASHI SUGIHARA. Some Thermodynamic Properties in Spinel Solid Solutions with the Fe_3O_4 Component.....	107
H. F. FRANZEN AND G. A. WIEGERS. The NiAs-MnP Phase Transition in VS.....	114
T. BIRCHALL AND A. W. SLEIGHT. Nonstoichiometric Phases in the Sn-Nb-O and Sn-Ta-O Systems Having Pyrochlore-Related Structures.....	118
U. BERNDT, D. MAIER, AND C. KELLER. New $A^{III}B^{III}O_3$ Interlanthanide Perovskite Compounds.....	131
H. WEITZEL UND C. KELLER. Neutronenbeugungsuntersuchungen an $(SE_{0.5}U_{0.5})O_2$ ($SE = Y, La, Nd, Ho, \text{ und } Lu$).....	136
JEAN GALY, GEORGES MEUNIER, STEN ANDERSSON ET ANDERS ÅSTRÖM. Stéréochimie des Éléments Comportant des Paires Non Liées: Ge (II), As (III), Se (IV), Br (V), Sn (II), Sb (III), Te (IV), I (V), Xe (VI), Tl (I), Pb (II) et Bi (III) (Oxydes, Fluorures et Oxyfluorures).....	142
ABSTRACTS OF FORTHCOMING ARTICLES.....	160

VOLUME CONTENTS

Number 3, March 1975

CLAUDE DELMAS, CLAUDE FOUASSIER, ET PAUL HAGENMULLER. Les Bronzes de Cobalt $K_xCoO_2(x<1)$ L'Oxyde $KCoO_2$	165
M. O'KEEFFE AND B. G. HYDE. Relationships between the Structures of the Rare Earth Fluorides and High Chalcocite Cu_2S . Implications for Solid Electrolyte Behavior ..	172
NOBORU KIMIZUKA AND TAKASHI KATSURA. Standard Free Energy of Formation of $YFeO_3$, $Y_3Fe_5O_{12}$, and a New Compound YFe_2O_4 in the $Fe-Fe_2O_3-Y_2O_3$ System at $1200^\circ C$	176
P. H. BOTTELBERGHS AND F. R. VAN BUREN. Phase Relations, Dopant Effects, Structure, and High Electrical Conductivity in the $Na_2WO_4-Na_2MoO_4$ System	182
J. H. W. DE WIT. The High Temperature Behavior of In_2O_3	192
E. SEGAL AND W. E. WALLACE. Rare Earth in a Hexagonal Field IV	201
L. HÄGGSTRÖM, J. GULLMAN, T. ERICSSON, AND R. WÄPPLING. Mössbauer Study of Tin Phosphides	204
CARL W. F. T. PISTORIUS. Polymorphism and Stability of Some Sodium Cryolites to High Pressures	208
H. D. LUTZ UND H. HAEUSELER. IR-Spektroskopische und Röntgengraphische Untersuchungen an Thiospinellmischkristallen	215
J. CHOISNET, A. DESCHANVRES, ET B. RAVEAU. Etude Systématique des Relations entre les Structures Wadéite et Tétragermanate	223
A. W. SLEIGHT, K. AYKAN, AND D. B. ROGERS. New Nonstoichiometric Molybdate, Tungstate, and Vanadate Catalysts with the Scheelite-Type Structure	231
T. DICKINSON, A. F. POVEY, AND P. M. A. SHERWOOD. X-Ray Photoelectron Spectroscopic Studies of Solid Electrolytes	237
MARC NOGUES ET PAUL POIX. Effect Jahn-Teller Cooperatif et Affinite Tétraédrique des Ions Mn^{2+} et Zn^{2+} dans le Système $Mn_3O_4-Zn_2SnO_4$	245
JEAN-RAYMOND GAVARRI ET DOMINIQUE WEIGEL. Oxydes de Plomb. I. Structure Cristalline du Minium Pb_3O_4 , à Température Ambiante ($293 K$)	252
R. WÄPPLING, L. HÄGGSTRÖM, T. ERICSSON, S. DEVANARAYANAN, E. KARLSSON, B. CARLSSON, AND S. RUNDQVIST. First Order Magnetic Transition, Magnetic Structure, and Vacancy Distribution in Fe_2P	258
ABSTRACTS OF FORTHCOMING ARTICLES	272

Number 4, April 1975

ROGER OLAZCUAGA, JEAN-MAURICE REAU, MICHEL DEVALETTE, GILLES LE FLEM, ET PAUL HAGENMULLER. Les Phases Na_4XO_4 ($X = Si, Ti, Cr, Mn, Co, Ge, Sn, Pb$) et K_4XO_4 ($X = Ti, Cr, Mn, Ge, Zr, Sn, Hf, Pb$)	275

Information for Authors

The *Journal of Solid State Chemistry* publishes manuscripts on chemical, structural, thermodynamic, electronic, magnetic and optical properties and processes in solids. Typical studies encompass crystal chemistry, phase equilibria and transformations, order-disorder phenomena, diffusion, high-temperature and high-pressure processes, crystal growth mechanisms, epitaxy, bonding in solids, reactions at surfaces, statistical mechanics of defect interactions. Both theoretical and experimental papers are welcome. On occasion a critical review is sought in selected rapidly developing fields.

English, French, and German are the official languages of the Journal. Papers in Russian are acceptable, but they will be translated into English before publication.

Manuscripts may be submitted to the Editor (M. J. Sienko, Department of Chemistry, Cornell University, Ithaca, NY 14850) or through any member of the Editorial Advisory Board.

Manuscripts should be submitted in triplicate—double-spaced on one side of 21.5×28 cm paper. Headings of major sections should be typed in capital letters and centered on the page.

Each page of the manuscript should be numbered. The first page should contain the article title, author's name, and affiliation. At the bottom of this page should appear any footnotes to the title (indicated by superscript*, †). The second page should contain an abstract (50–150 words) which should be suitable for use in *Chemical Abstracts*.

The American Chemical Society's *Handbook for Authors* should be followed regarding matters of style and abbreviations of units. The *Style Manual* of the American Institute of Physics is also an acceptable guide.

Tables. Tables should be numbered with Roman numerals in a sequence corresponding to the order of citation in the text. Tables larger than two manuscript pages will be reproduced by photoengraving; therefore all extended tables should be prepared carefully in clear sharp type. Errors in such tables cannot be corrected in proof. Whenever appropriate, the tables should be designed to fit the Journal page after photoreduction. Glossy prints of these extended tables are desirable. Footnotes to tables are to be placed directly below the table and should be indicated by superscript, lower-case italic letters(^a, ^b, ^c).

Special Tables. In lieu of publication, it may be necessary to deposit unusually long tables with the National Auxiliary Publications Service (NAPS). In particular, structure factor tables must be deposited if, in a clear, proportioned, photoreduced format, they would occupy more than one Journal page (this corresponds to a limit of about $1000F_0$ and F_c). In any case, three copies of all tables must be submitted with the manuscript.

For material to be deposited, a deposit fee of \$15.00 for up to 98 pages of standard-size or 48 pages of oversize deposited material is to be paid by the authors to NAPS. Appropriate transmittal forms to accompany deposited material will be supplied to the authors by the editors at a time a paper is accepted for publication.

The following footnote (wherein missing numbers are to be inserted by the author in page proof) should be used to reference deposited material:

See NAPS document No..... for pages of supplementary material.
Order from ASIS/NAPS, c/o Microfiche Publications, 305 E. 46th St., New York, N.Y. 10017. Remit in advance for each NAPS accession number \$1.50 for microfiche or \$5.00 for photocopies up to 30 pages, 15c for each additional page. Make checks payable to Microfiche Publications.

Figures. Authors should send glossy prints or original black ink drawings, no larger than 21.5×28 cm. It is important that drawings be lettered with a lettering set and planned to fit the proportion of the printed page (14×20 cm). Background grids should not be included. The caption of each axis should be lettered parallel to its axis. Lettering on the original should be large enough to be legible after a reduction of 50%. For half-tone reproductions, glossy, high-contrast, black and white prints should be submitted. Each figure should be identified in a margin with the author's name and figure number. Figures are to be cited in text by consecutive Arabic numerals. Figure captions should be typed as a list on a separate page.

Equations. Equations should be typewritten or clearly handwritten, with an Arabic number if necessary for reference placed in parentheses to the right of the equation. Reference to equations should use the form "Eq.(3)."

Footnotes. Footnotes to the text should be indicated by consecutive superscript numbers and listed on a separate page at the end of the article.

References. References should be cited in the text by consecutive underlined numbers in parentheses. The references must appear on a separate sheet, listed in numerical order—i.e., in accordance with order of citation in text. After the reference number, the author's initials, last name, journal name, volume, initial page number, and year (in parentheses) should be listed in that order. Abbreviations for journal names should follow the style of *Chemical Abstracts' Service Source Index*. For book references, give the author's name, name of book (in quotes), editor's name (if any), edition (if other than the first), chapter, or page number, publisher's name, place, and year of publication.

Proofs. Unfolioed page proofs will be sent to the author with reprint order forms. There is no page charge.

Notice

Subject Index for Volume 13 will appear in the December 1975 issue as part of a cumulative index for the year 1975.

Theoretical Chemistry: a series of monographs No. 4
Series editors D. P. Craig and R. McWeeny

MOLECULAR COLLISION THEORY

M. S. Child

*Department of Theoretical Chemistry
University of Oxford, England*

September 1974, x + 302 pp., £8.50/\$22.00
0.12.172650.9

This book contains an introduction to molecular collision theory for those seeking an interpretation of experimental results. Emphasis is given to the validity and relevance of available theoretical techniques, rather than to the formal structure of the theory. The argument starts from a quantum mechanical standpoint, but the reader is quickly led to appreciate the importance currently given to semi-classical methods.

Molecular Collision Theory will serve primarily as a reference book, but one which also consolidates recent advances in the literature, and should prove of value to chemists and physicists with a grounding in bound state quantum mechanics.

Contents

Introduction.
Classical scattering by a central force.
Quantum scattering by a central force.
Elastic scattering phase shifts.
Semi-classical models.
General theory of inelastic collisions.
Quantum inelastic transition probabilities.
Semi-classical models.
The semi-classical *S* matrix.
Reactive scattering.
Appendices.
References. Author index. Subject index.
